

S4AO - MODULE OF 4 ANALOG

- Conversion of RS-485 MODBUS data into standard signals in 4 channels (current 0/4...20 mA or voltage 0...10 V).
- Possibility of connection via internal RS-485 port in order to increase no of analog outputs in other devices.
- Two independent communication ports (possibility to work as Master/Slave).
- Master Modbus function dedicated to read out data from other RS-485 devices and to scale analog value.
- Slave Modbus function to set the signal on analog outputs.
- Outputs working time counter.
- Mounting on a TS35 rail.
- Galvanic separation between 2 groups of outputs.
- Possibility of configuration through USB without power supply.
