INTRODUCTION

The KOS1603 series is a cost effective DIN rail mounted temperature converter from DITEL. The range consists of two versions, the KOS1603P accepts Pt100 inputs, and the KOS1603TC accepts seven common thermocouple types plus mV input.

Designed for ease of use, this range is configured with our KOS USB port powered configuration module. The module interfaces a PC USB port to the KOS1603, using the (4 to 20) mA loop to communicate. Using our free configuration software, you will be able to read the current configuration data, and then perform any changes you wish to make to the configuration. To further help save time, the KOS1603 and configuration module do not need to be wired to a power supply during the configuration process, both are powered by the USB interface on your PC. The following parameters are configurable:

MODEL	INPUT TYPE	LOW RANGE	HIGH RANGE	UNITS	BURNOUT
KOS1603P	Pt100	Input @ 4 mA	Input @ 20 mA	°F, °C	Up/Scale Down/Scale
KOS1603TC	K, J, E, N, T, R, S, mV
